Foreword

The 78000 and 78011 Series valves provide control of high pressure fluids without the erosion, vibration and high noise levels associated with conventionally designed control valves. Because of their relatively large flow passages and a shearing action provided by their multiple step plug and cage designs, these valves are particularly well suited for applications involving fluids with entrained particles.

The 78000 Series multiple step plug and cage design uses the principal of "Adiabatic Flow With Friction" to reduce pressure, much like pressure loss occurring in a pipe line. When type "A" or "B" trim is utilized, an additional variable restriction feature is provided to minimize pressure drop in the last pressure reducing stages. In these ways, cavitation, velocity and noise are effectively controlled.

specialty valves

A wide variety of engineered valve products based on the multi step trim design can be provided to satisfy specific process conditions. See pages 10 and 11 for examples.

low pressure recovery

Low pressure recovery, as indicated by the high critical flow factors shown on page 4, minimizes

potential for cavitation of liquids and contributes toward reduction of noise for all fluids.

tight shutoff

Protection from seat erosion is insured by provision of ANSI B16.104, Class V Seat Leakage when standard metal seats are furnished and Class VI Seat Leakage when optional soft seats are supplied.

high allowable pressure drops

With a balanced trim option for valve sizes 2" through 4", a wide range of allowable pressure drops are available with conventional spring diaphragm or positioning cylinder actuators.

variation of body configuration offerings

A standard angle body and optional in-line body styles are offered to accommodate a variety of piping requirements.

simple trim maintenance

The multiple step trim, made from specially chosen hard materials gives maximum service life and the quick change seat ring design provides ease of trim replacement.

For additional information, contact your local Masoneilan representative. A list of the various locations is provided on the back cover.

Optional Designs

Engineered Valve Options Based on 78000 Series

Masoneilan has manufactured a variety of special valves based on the original 78000 series design for applications with specific requirements not generally met by this product line.

Low Downstream Pressures:

The trim design shown in Fig. 1 lends itself particularly well to water injection applications with low outlet pressure conditions.

The product is available in angle, "Y" and "T" block pattern.

Sizes range from 1 thru 12 inch, C_v values from 3 thru 400.

The construction allows for many different alloys and body configurations.

Extreme High Pressure Drop:

The valve shown in Fig. 2 has been designed for pressure drops of 5000-6000 psi under continuous duty in a corrosive process stream, and has been successfully applied in highly erosive hydrocarbon with catalyst fines.

High and Low Temperatures:

The valve shown in Fig. 3 is particularly suitable for extreme low or high temperature applications. Thermal expansion is taken care of by the free expanding seat ring design.

Significant thermal shock can be handled without potential overstressing of the seat ring cage.

Very Low C_v Values:

The labyrinth design shown in Fig. 4 has been developed for extremely low C_v values, high turndown ratios and high pressure drop.

The valve is available with 1 and 1-1/2 inch connections.

C_v values ranging from 0.01 thru 2.

We encourage our customers to consider these products for applications outside the range of the standard product.

Consult Masoneilan for your applications.

HBX8320A26	120V-60Hz or 110V-50Hz	☒
HPX8320A26	125DC	☒
HBX8320A40	120V-60Hz or 110V-50Hz	☒

Additional Options Available

Other Body Materials	☐
Other Flange Facings	☐
N.A.C.E. Compliance	☒
Custom Trim Materials	☐
Non-Destructive Examination	☐
Electric and Electro-Hydraulic Actuators	☐

Refer to specific actuator and accessory specification literature for complete information.

How to Specify your 78000 Series Control Valve

Specification Data

The checklist provided below contains the necessary data to specify the basic 78000 Series Control Valve. The page references will refer you to the appropriate sections when a selection is to be made.

For Options and Accessories, see page 14.

Quantity:	Size	Model (page 3):	
Body	Type	Angle ☐ In-line ☐	
	Material (pages 7 & 9)	Carbon Steel ☐ Chr. Mo Gr F5a ☐ 316 St. St. ☐	
	Rating (page 3)	600 ☐ 1500 ☐ 900 ☐ 2500 ☐	
	Connections (page 4)	Threaded ☐ S/W Sched ☐ RF Flanged ☐ B/W Sched ☐ RTJ Flanged ☐	
Bonnet	Type	Standard	
	Packing (pages 7 & 9)	PTFE Asbestos ☐ Grafoil ☐ Lubr & Iso Valve ☐	
Trim	Size & Type (page 4)	A (liquid) ☐ B + (liquid) ☐ B (liquid) ☐ Gas or Steam ☐	
	Spacer Tube & Liner	Material (Pg. 7 & 9) 17-4 PH St. St.	
	Plug	Type	Unbalanced ☐ Balanced ☐
		Guiding	Cage
		Material (pg. 7 & 9)	440-C St. St.
Seat Ring	Material (pg. 7 & 9)	316 St. St. Hard Faced Seat ☐ 316 St. St. w/PTFE Seat ☐	
Leakage	ANSI Class (page 4)	V ☐ VI ☐	
Actuator (Page 8)	Type	Spring Diaphragm ☐ Throttling Piston ☐ (Domotor®)	
	Sizes	13 ☐ 15 ☐ 18 ☐ A ☐ B ☐ C ☐ D ☐ DD ☐	
	Action	Flow to Air to Fail	Open ☐ Close ☐ Open ☐ Close ☐ Open ☐
	Range① (page 12)	See Pressure Drop Tables	

① Other spring ranges not listed in pressure drop tables are available.
